4.1.13. 5 yr old ,550kg ,4 month pregnant, Holstein cow had a 2 month histo...

Author: Brooke Delaney

5 yr old ,550kg ,4 month pregnant, Holstein cow had a 2 month history of weight loss, reduced appetite and decreased milk production. The owner reported that the cow had mild colic symptoms associated with a fever 2 days ago. Prior to presentation, the owner treated the cow with oral antibiotics and he also administered one dose of an NSAID (Banamine, flunixin meglumine) intravenously. The cow came from a closed herd but the owner reported that a few other cows (the cows with the highest milk production) also developed weight loss and reduced milk production. The cow's diet consisted of a haylage and high moisture shell corn. On PE: quiet and responsive and was reluctant to move. The mucous membranes were pink and the CRT was 2 sec. Auscultation of the heart and lungs were within normal limits. Rumen contractions were decreased at 1 contraction/3 min and had a soft expiratory grunt on withers pinch. The cow normal feces. Rectal examination revealed a small rumen and a pregnant uterus. No other abnormalities were present on physical examination. If this is liver abscess, is this a good prognosis?

Please choose only one answer:

- Yes
- No

Author: Brooke Delaney

7 yr old mare presented for weight loss over last 3-4 months. Yesterday she was found lying in pasture and reluctant to get up. Thinking this is a mild colic, the owner administered 4 grams of phenylbutazone orally. The next morning, the mare was standing in one corner of the stall, pressing her head up against the wall. All the bedding was piled up in the center of the stall, indicating that the mare had been circling during the night. Her diet consisted of 2 scoops of oats per day, 4 flakes of alfalfa hay and free access to pasture. Vaccinations and deworming were up to date. PE , the horse was lethargic and thin body condition but no significant findings noted. BioChem panel : low BUN and Albumin levels. Increased T. Bili. GGT and SDH values WNL. Which is Not a cause of this horse's liver failure?

Please choose only one answer:

- Theiler's disease (serum sickness)
- Pyrrolizidine toxicity
- Chronic active hepatitis
- Cholelithiasis
